# INSTALLATION SUR WORDPRESS

This tutorial shows how to install Target First on your WordPress site. You must have sufficient rights to install plugins. WordPress version pictured is 5.5.1

Go to your WordPress administration console, Plugins section ("Extensions" in French), then choose "Add new" ("Ajouter" in French).
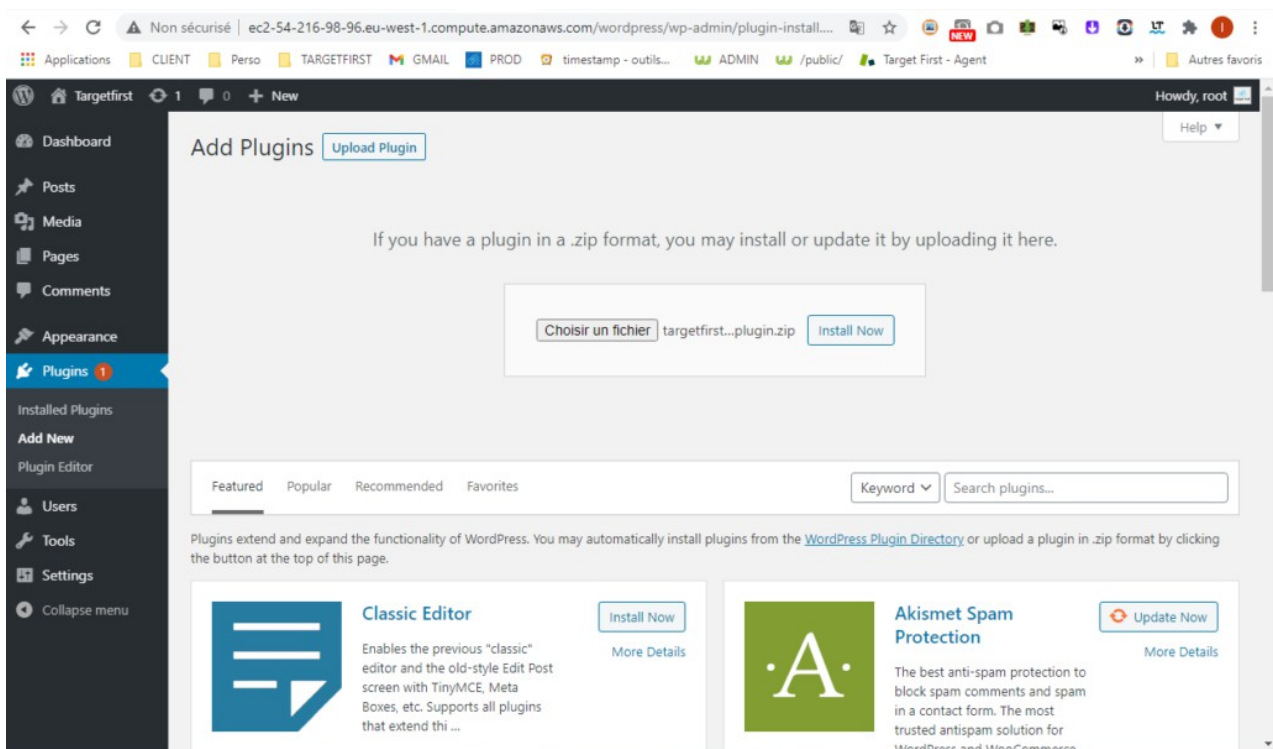

At the top of the page, load the Target First plugin by clicking on "Upload Plugin".

Then choose the zip file, available at this address:

https://www.watcheezy.net/plugins/wordpress/targetfirst-wordpress-plugin.zip

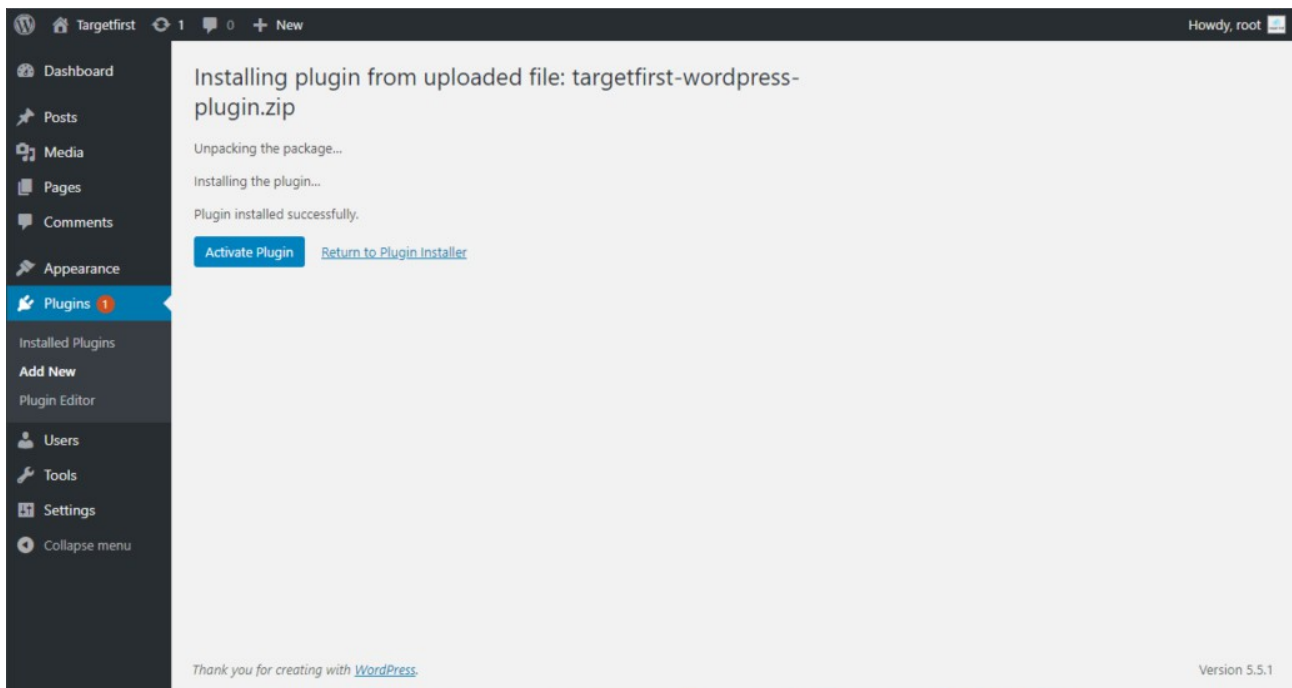

WordPress may ask you for access to the server (FTP) so that it can install the plugin. Enter the connection information for your server.

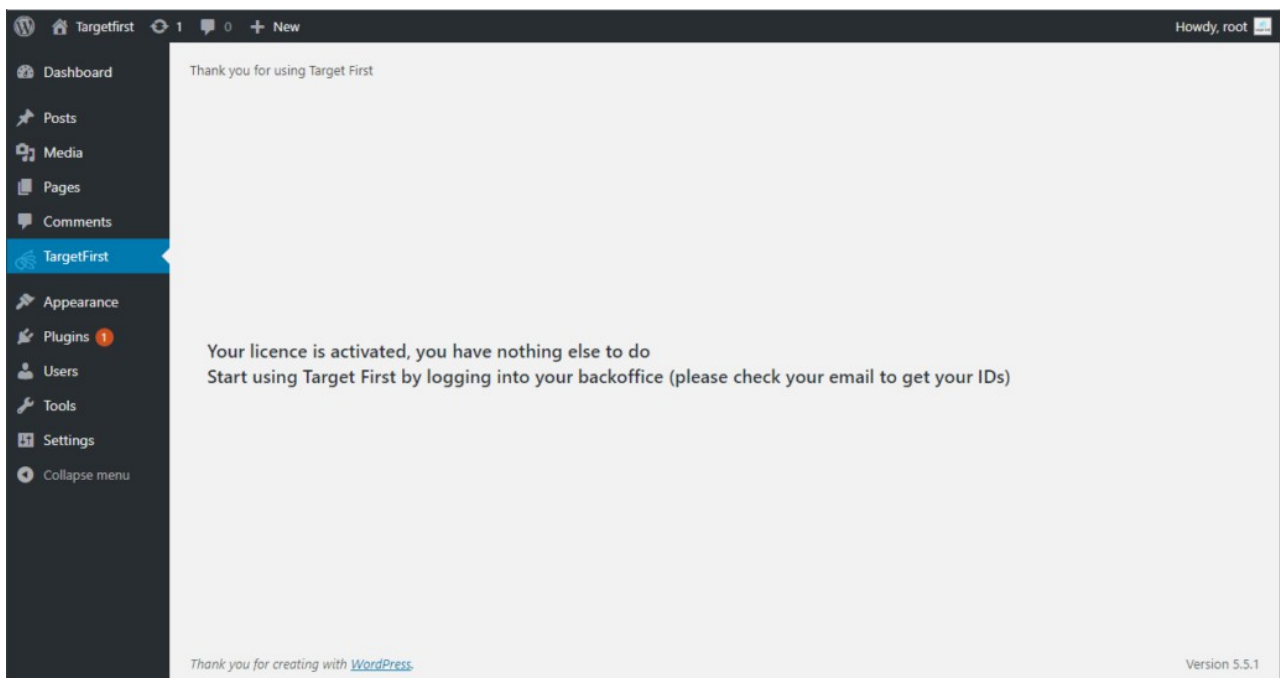

Once installed (this is done automatically), activate the plugin.

A new Target First submenu is available on the left side of the screen. See you on it.

Finally, enter the license key that was communicated to you (by email) when you registered with Target First.

That's it for the WordPress part of the installation. If your license is active and Target First's internal settings allow it, you should see the chat widget directly at the bottom right of your site.
